Allowable Subject Matter

Claims 1 – 20 are allowed in view of Applicant's arguments. The following is a statement of reasons for indicating allowable subject matter.

As argued, the prior art fail to fairly teach a navigation system comprising, in combination with other limitations, using an input image data as a search key or searching a database of stored image data to extract image data having a required level of resemblance to the input image data; correlating image data with position information and setting the position of an image selected by a user as a destination.

Furthermore, the prior art of record fail to teach a navigation system comprising, among other limitations, an image search unit which includes a feature-amount extraction unit for extracting a feature amount of the first search key and a matching unit for extracting at least one piece of image data whose feature amount bears a predetermined or higher level of resemblance to the extracted feature amount by comparing the extracted feature amount against a feature amount of each of the image data stored in the image database; an area segmenting unit for extracting an outline of an object included in the first search key and segmenting a predetermined area from the first search key, wherein the image search unit searches across the image database by using image data within the segmented area, as a second key; a character search unit for searching point-determination information that is stored and correlated with the image data stored in the image database by using the recognized character information,

as a third search key, and extracting at least one piece of image data whose character information bears a predetermined or higher level of resemblance to the third search key, wherein a search-result output unit provides a plurality of narrowing-down conditions to the user for reducing the number of the extracted image data and outputs image data obtained by the reduction according to a predetermined condition selected by the user from among the narrowing-down conditions.
